Abstract

The purpose of this research is to create novel directions for the digital calendar and see what how they might have an effect on how users perceive time and events in a piecemeal way that would be near impossible on a physical calendar.

The reason for rethinking the digital calendar is because it was a direct copy of its physical counterpart and I believe that there are more interesting avenues that event tracking can do in a way that has never been done before. I will be introducing a data format for the entries into the digital calendar that will make its organization cleaner and thus a user will be able to find information faster within the framework.

Information on how I am conducting the research*** havent done it so dont have it. Oporteat consequat alienum an nibh ius nobis id vivendo qui scaevola wisi labore ea per in commodo. Vel cu et cu ius delicatissimi feugait ei cu fabulas vix stet dolor nonumes sapientem. Assentior mel ei malis dissentias praesent pri mundi eos partiendo instructor eu mea dissentiunt. Digital calendar, Linked, Interface design, Time Management

0.1 Introduction

Most of us have probably used a calendar before in our lives, even if just for home, school or work. Let's be honest, they're boring. Calendar apps can be

viewed just as a list of appointments, and in an inefficient way. You need to find a meeting time, enter the information and upload it. Then the app loads the remaining available time and you either have to highlight the next time you want to attend, or see the next appointment. The way you set up your academic calendar can have a major impact on how much work you actually get done. By identifying how much time you can give to each task in each class, you'll be able to schedule your workload more efficiently, set up meaningful group projects, and study efficiently at the end of the week. Even more so than the setup of the calendar is the structure of the calendar which is a typical given. We see these months days and years to fill up but we dont exactly know with what. Or even have the dedication to keep this digital planner filled with quality data that we can refer to in the future leaving our calendar to be a wasteland for potential in the Information age when we can do so much more with it. I am proposing a calendar that links data and information together in a holistic way that the user of such a tool can without fear plan and organize and review their events. The calendar will have access to smart health device data and or smart phone device data to get the amount of steps the user has taken, the heart rate of the user and the sleep of the user if accessible and lastly the location data as well. There are privacy concerns when you talk about data such as listed about but the application it self will only be OSS so any malicious intent will be seen in the implementation and changed at once. The calendar will be based solely on the user of the application, nothing or no one else.

0.2 Background Study

So looking into the background for redesigning the calendar it appears that this is not the first time such a concept has been proposed. If one sits and thinks the problem is really as old as the notion of

time itself. Humankind looking to make structured information out of the cycles that we observe and track it meaningfully. Is this a solvable problem or is it a relative notion on how we want to organize our time and it truly depends on how are lives are structured. It's a thought not a useful one but used to bring up that fact that using the point that art is relative doesn't help or create any art and is useless and leads to dull world. So we will stay away from such a notion and continue to create the art that is reforming the way we view time! Research Articles that will be used are in the research folder! Abhorreant intellegebat et platonem et ex philosophia eu cotidieque ex ancillae incorrupte id tibiue no et. Erat persius accumsan et duo has assentior oratio ut an voluptatum recteque habeo nonumes.
